

Feedback for POS Pizza

Using POS Pizza has pros and cons. Here is some pros and cons of using POS Pizza.

Pros for POS Pizza

- Design is simple and it is easy to understand for normal user.
- Each categories has Related items. A user doesn't need to go to another page.
- Easy Software Installation.
- Other Program doesn't appear if the Pizza program is running. So a staff can't open other program.
- The design is simple so it is easy to learn for the new staff and it doesn't need any qualification to learn about the software.
- It doesn't need high requirement for client to run this software
- It use ICONS for each process. So it can exactly know the meaning of the process.

Cons for POS Pizza

- Simple design can be different from the Designer point of view. Design is not creative.
- A normal can't know exactly that is log in or not. Because it started with the main page and it doesn't ask any log in form.
- And each button have it's own short description. But a normal user can't know about the short description. For example "Prn Rapt". So a normal can't understand about that short description.
- And it is difficult to find something for the process. Because it is complicate in one place and it will difficult for the new user.
- It will be difficult for other because it can only use who exactly know about the software.
- Some of the ICONS are too large, so it is not good look as a designer or normal user. it can low the facial of the company.

Feedback

It is simple, easy to use and some parts are familiar to normal user and some are not. In my opinion, Log in page must be first before the main page. Because it is not easy to know that the user is log in or not. But because of the disable buttons, a user can easily know that he is log in or not. And other program can't run if Pizza software is open. That is the good point, a staff can't open other software like browser or other. And I want to recommend to give the full information of each buttons. Because short description can't easily know for the new staff. And some of the buttons like in the order processing page, a normal user can't find some of the process button without training. And some of the icons like in login form are too big and it is not comfortable for the scene. So it should be small and good scene.
